

Water Expertise For Resorts

Specialists in aquatic environments: freshwater, estuarine and marine. If it involves water, it involves frc environmental. Our experience and understanding provides the foundations for practical and effective ecosystems and biodiversity management. We are your **off-shore** solutions provider.

Simmonds & Bristow are the regional and remote water specialist. For 50+ years we have acted as trusted advisors to our clients . We use science, engineering and technology to bring you good clean water - from catchment to cup and back again. We are your **on-shore** solutions provider.

TWO TEAMS TO HELP WITH YOUR EA

Your Environmental Authority is aligned to your whole business: on and off-shore. With our two teams of experts to assist you, rest assured that you'll achieve results with greater efficiency and greater effectiveness.

WATER SPECIFIC EXPERTISE

When it comes to your water and wastewater infrastructure, making sure that your plant and equipment are operating the way they should, S&B have you covered.

If your resort is growing and changing, increased flows can negatively impact your infrastructure. Our team can advise you to keep your plant up to the task.

Across our range of training, plant operations and consulting, we have assisted resorts such as Fitzroy Island, Kingfisher Bay, Heron Island, Lizard Island and Silky Oaks Resort.

When it comes to your receiving environment and making sure that your operations and processes aren't causing environmental harm, frc environmental has you covered.

Island resorts have a particular problem coping with waste - particularly when they need to dispose wastewater to ecologically significant areas.

We have assisted clients such as Kingfisher Bay Resort and King Island Dairy to complete their environmental management plans, update their EA and implement cost effective Receiving Environment Monitoring Programs.
